1 - What is SavvyChat?

SavvyChat is a free chat & text platform built specifically for car dealerships. Customers click the widget on your website to chat live with your team, or they drop their name and phone number and your BDC reaches out by text. Every conversation lands in your CRM as a real lead. Most dealers go from sign-up to live on their site inside a single afternoon.

Every chat & text-capture lead flows straight to your CRM.

How leads move through SavvyChat.

Why dealers are switching

Most chat & text vendors charge \$400–\$2,000/month, lock you into 12–24 month contracts, count junk service-hour requests as “leads,” and tank site speed with heavy scripts. SavvyChat costs \$0, has no contract, doesn't pad lead counts, and the widget is under 50 KB and async-loaded so your Core Web Vitals stay clean.

2 - Who this guide is for

Dealership admins

You're setting up SavvyChat for the rooftop or for the dealer group. You'll do everything from creating the account through configuring the widget and routing leads to the right CRM. Read it cover to cover.

Dealership staff / BDC

You'll spend most of your day in the inbox handling chats and the CRM working text-capture leads. Jump to *Going live & the chat inbox* (Section 10) and *Daily playbook* (Section 16).

3 - Portal navigation at a glance

Once logged in, the left sidebar is your map to the entire portal. It's organized into seven groups:

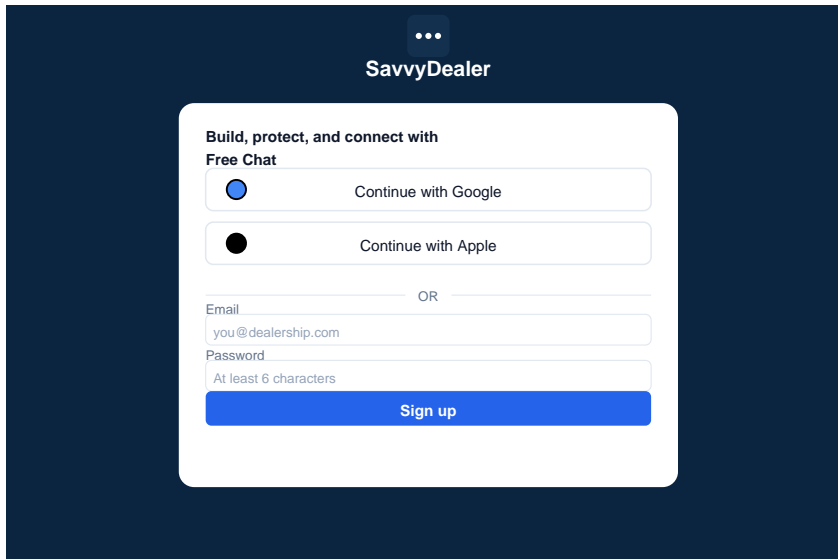

SETUP	Getting Started — the onboarding wizard. Returns you here if you haven't finished setup.
OVERVIEW	Dashboard — daily snapshot of conversations, leads, and agent activity once you're live.
PLATFORM MANAGEMENT	Websites — manage all domains the widget runs on. Add additional rooftops or microsites here.
MANAGEMENT	Users — add agents and admins to your dealership and assign roles.
MY DEALERSHIP	Conversations (the live inbox), Leads (CRM push history and lead pipeline view), Widget Config (the configurator, Section 8), and Email Notifications (who gets alerted when, plus templates).
SECURITY	Audit Logs — everything that's happened on the account: who logged in, who changed widget settings, who pushed which lead. Useful for compliance and troubleshooting.
ACCOUNT	Settings — your personal profile, password, and 2FA. Covered in Section 5.

TIP

What you see in the sidebar depends on your **role**. Agents only see Conversations and Settings. Dealer Admins see everything for their rooftop. Multi-Site Admins switch between rooftops with the dropdown at the top of most screens.

4 - Creating your account

Open portal.savvydealer.com in any modern browser. The landing screen offers three ways to sign in.

The portal sign-up & log-in screen.

Option A - Continue with Google

Click **Continue with Google**. A Google account picker opens in a new window. Pick the email address you want associated with your dealership account — this becomes your portal login. After picking the account, Google asks for consent once, then drops you back in the portal, signed in.

Option B - Continue with Apple

Same flow, with an Apple ID. Use this if your dealership runs on iCloud / Apple-managed email.

Option C - Email and password

Type the email and a password of at least six characters, then click **Sign up**. You'll get a confirmation email; click the link inside to finish.

TIP

Already have a SavvyDealer account — e.g. you're a Savvy Dealer marketing client? The system links your existing user. Click **Log in** at the bottom of the form to switch from sign-up to login mode.

5 - Account & profile settings

Click the gear icon labeled **Settings** in the left sidebar to manage your profile, security, and password.

Account Settings.

Profile Information

Email is locked — it's the identity Google or Apple gave us, or the email you signed up with. To change it, contact a SuperAdmin (your Savvy Dealer rep). **First Name** and **Last Name** show in the chat header when you reply to customers. **Phone Number** is the 2FA SMS number — ten digits, US format.

Two-Factor Authentication

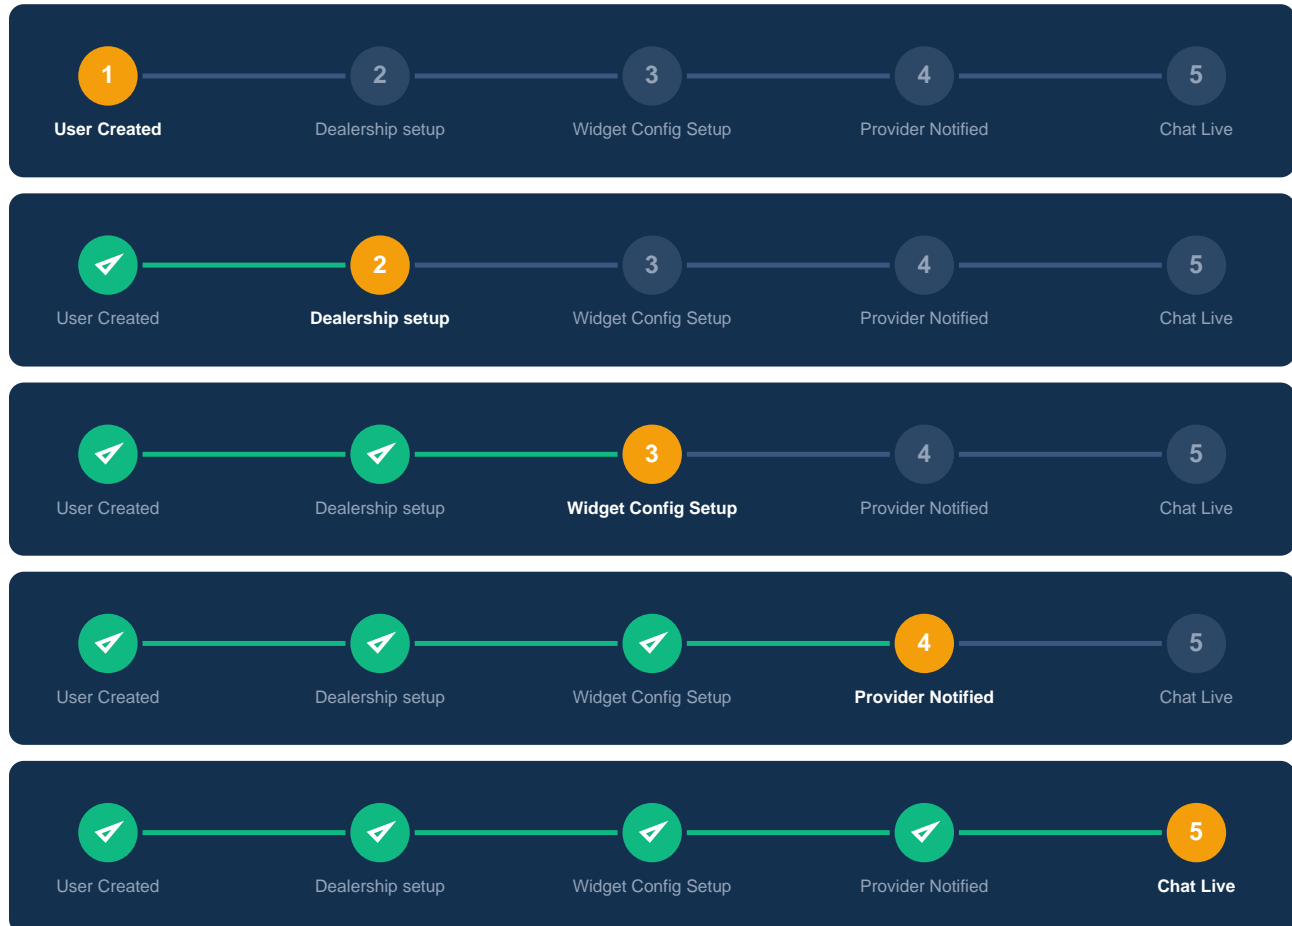

Customer chats contain real names, phone numbers, and shopping intent. Protect them. Toggle **Two-Factor Authentication (2FA)** on; the next login will require a six-digit SMS code.

Account Info & Change Password

The right column shows your **Role**, **Last Login**, and when your **Account was Created**. If you signed up with email/password, use **Change Password** to update it. If you used Google or Apple SSO, manage the password with that provider.

6 - The onboarding wizard at a glance

Right after sign-up, SavvyChat puts you in a five-step wizard that walks you from a brand-new account to a live chat widget on your dealership's website. You can leave and come back — your progress is saved.

1. User Created

Done automatically the moment you sign in.

2. Dealership setup

You create the dealership record (name, contact email, website, provider). Section 7.

3. Widget Config Setup

Five tabs (Config, Chat Settings, Working Hours, Lead Form, Embed Code) plus a feature toggle. Section 8 covers this in depth.

4. Provider Notified - Waiting for Approval

We email your website provider the install snippet. Portal shows a waiting state. Section 9.

5. Chat Live

Widget is installed and live; conversations land in the inbox and flow to your CRM. Section 10.

7 - Step-by-step: dealership setup

Step 2 of the wizard. You'll fill in four fields and click **Create Dealer**.

The screenshot shows the 'Create Dealer' form in the Savvy Dealer admin interface. The form is part of a 5-step wizard. Step 1 'User Created' is complete. Step 2 'Dealership setup' is the current step, showing fields for Dealer Name, Contact Email, Website URL, and Website Provider. Step 3 is 'Widget Config Setup', Step 4 is 'Provider Notified', and Step 5 is 'Chat Live'.

Website Provider
- Select your website provider -

Create Dealer Cancel

Create Dealer form.

Dealer Name

How your dealership is labeled inside the portal and in the chat header on your site. Use the name shoppers know you by (e.g. *ABC Honda*), not your legal entity.

Contact Email

Becomes the primary admin login for the dealership. Defaults to the email you signed up with.

Website URL

The domain where the widget will live. Automatically authorized for the widget script. Additional domains can be added later under **Websites**.

Website Provider

Pick from 20+ supported automotive website providers: 321 Ignition, AutoFusion, AutoRevo, Dealer eProcess, Dealer.com, DealerFire/Sincro, DealerInspire, DealerOn, DealerSocket/IDMS, fusionZONE, Motive, Naked Lime, Overfuel, Team MXS, Team Velocity (Apollo), Wayne Reaves, and others. Choose **Other (specify name)** if yours isn't listed.

HEADS UP

Choosing your website provider correctly matters. The install email we send them is tailored to their CMS — pick wrong and your install will take longer.

8 - The Widget Configurator (deep dive)

This is Step 3 of the wizard, and where SavvyChat goes from generic to *yours*. The page is laid out in three stacked zones:

Top: dealer / website dropdowns (multi-rooftop operators switch context here). **Middle:** *Features for [Dealer Name]* — toggle which feature modules are active. Today: Text/Chat (live now) and Finance Calculator (coming soon). **Bottom:** five tabs that configure the active feature, with a sticky **Live Preview** on the right that updates as you change anything.

Widget Configurator — full screen.

8.1 - Features bar — Text/Chat vs. Finance Calculator

The two cards at the top let you toggle which feature modules are active for this dealer. Click a card to load *its* tabs.

Text / Chat (Active by default) — the live chat + text-capture widget. This is the heart of SavvyChat and what most of this section covers. **Finance Calculator** (Disabled by default) — an embedded “Out the Door” payment estimator. Toggling it on swaps the lower tabs to Finance Calculator's own set (Branding,

Out The Door Settings, Settings, Rate Table, Embed Code).

TIP

Each feature has its own independent embed code, so dealers who only want one (e.g. just the calculator) don't carry the weight of the other.

8.2 - Config tab — Location, Contact Us, Lead Gen, Branding

Four sections on a single scrollable page.

Location

Powers the widget's Location tab. Toggle **Show Location tab** on, then fill in the **Business Address** (shown on the map card), plus **Latitude** and **Longitude** in decimal degrees (-90 to 90 / -180 to 180). Tip: open Google Maps, right-click your location, click the lat/lng values to copy. **“Open in Maps” Link (optional)** overrides the auto-generated map link if you want to send shoppers to a specific Maps URL.

Contact Us

Configures the widget's Contact Us tab. Toggle **Show Contact Us tab** on, then enter the **Phone Number** (ten digits, US format — rendered as a click-to-call link) and **Email Address** (opens the visitor's mail client). The hours table on the widget comes from the Working Hours tab automatically.

Lead Generation Configuration

Three modes for how visitors are captured. Switching modes updates the live preview on the right immediately.

Lead Form + Chat <i>(default)</i>	Visitors see the lead form first, then continue into chat. Best balance of capturing contact info and converting high-intent shoppers.
Lead Form Only	Show only the lead form. Chat UI is hidden — no chatbot interaction. Use this when your team can't staff live chat but you still want website lead capture.
Chat Only	Skip the lead form. Chat opens automatically and asks for name + contact info conversationally. Lowest friction, highest engagement, but requires live agents.

Branding

Three color pickers plus position and logo. The header on the chat widget is a gradient — **Header Primary Color** is the left side, **Header Accent Color** is the right side. Set them to the same value for a solid header, or use two close shades for a subtle gradient. **CTA Button Color** drives the chat bubble color and the Submit button background. **Widget Position** is Bottom Right or Bottom Left. **Logo URL** is optional — paste the URL to your dealership logo image and it'll show in the header.

8.3 - Chat Settings tab

Controls the words your customers see. All optional — defaults are reasonable, but a personal touch helps conversion.

The screenshot shows the 'Widget Configuration' interface for 'Savvy Dealer'. The 'Chat Settings' tab is active, showing the following configuration options:

- Chat Title:** Chat with us
- Assistant Name:** Savvy Assistant
- Welcome Message:** Hi! How can we help you today?
- Offline Message:** We're offline. Leave a message and we'll get right back to you.
- Thank You Message:** Thanks! We'll be in touch shortly.

A 'Save Changes' button is located at the bottom of the configuration area.

Chat Title	The header text in the chat widget. Default: “Chat with us.” Many dealers use “Talk to ABC Honda” or include the rep's first name.
Assistant Name	Name attached to automated welcome / offline messages so they read less robotic.
Welcome Message	First thing the visitor sees when they open the widget. <i>“Hi! Looking for something specific?”</i> converts better than <i>“How can I help?”</i> because it invites a focused reply.
Offline Message	Shown when no agent is online (or outside Working Hours). Reassure the shopper their message lands somewhere real.
Enable AI Auto-Response	Toggle for the upcoming AI Chat add-on. When enabled and available, the AI handles after-hours and overflow without guessing — it escalates to your team when unsure.
Thank You Message	What the visitor sees after they submit the lead form. Default: “Thanks! We'll be in touch shortly.”

8.4 - Working Hours tab

When the dealership is “Open” vs. “Closed.” Drives three things: (a) the hours table inside the widget's Contact Us tab, (b) whether the widget switches to text-capture mode (closed hours = text capture), and (c) whether your **Offline Message** shows.

The screenshot shows the 'Widget Configuration' interface for 'Savvy Dealer'. The 'Working Hours' tab is active. The 'Timezone' is set to 'Eastern (ET)'. The 'Daily Hours' table is as follows:

Day	Open	Hours	Note
Mon	<input checked="" type="checkbox"/>	9:00 - 5:00	Optional note...
Tue	<input checked="" type="checkbox"/>	9:00 - 5:00	Optional note...
Wed	<input checked="" type="checkbox"/>	9:00 - 5:00	Optional note...
Thu	<input checked="" type="checkbox"/>	9:00 - 5:00	Optional note...
Fri	<input checked="" type="checkbox"/>	9:00 - 5:00	Optional note...
Sat	<input type="checkbox"/>	—	Optional note...
Sun	<input type="checkbox"/>	—	Closed

Working Hours — one row per day with Open toggle, Start, End, and an optional note.

Set the **Timezone** once at the top — Eastern, Central, Mountain, or Pacific — and it applies to every day. Below the timezone is a row per day of the week. For each day:

Open toggle Flip off to mark the day closed (Start/End collapse to — and the widget will show this day as closed in the Contact Us hours table).

Start / End Open and close times in HH:MM. Defaults: 9:00 AM to 5:00 PM Monday-Friday; Saturday and Sunday closed by default.

Optional note Appears next to the day in the widget's Contact Us tab. Useful for irregular hours like “*Last Sunday of the month only*” or “*Holiday hours — open 'til 8*”.

TIP

Update Working Hours *before* a holiday weekend, not after. The widget changes behavior the moment you save.

8.5 - Lead Form tab

What fields appear on the form visitors see in **Lead Form + Chat** and **Lead Form Only** modes.

Widget Configuration

Config Chat Settings Working Hours **Lead Form** Embed Code

Lead Form

Choose which fields appear on the lead capture form. Toggle on/off, then mark as required.

Form Heading
Start a conversation

Form Description
Fill in your details and we'll connect you with our team.

Button Text
Submit

Fields

Field	Visible	Required
Name	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
Email	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
Phone	<input checked="" type="checkbox"/>	<input type="checkbox"/>
Question	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>

Save Changes

Lead Form — control copy at top, field toggles below.

Copy controls

Form Heading — the bold title above the form. Default: “Start a conversation.” **Form Description** — one-sentence subtitle. Default: “Fill in your details and we'll connect you with our team.” **Button Text** — the submit button label. Default: “Submit.” Leave empty to use the default, or try something action-oriented like “Send my message.”

Fields

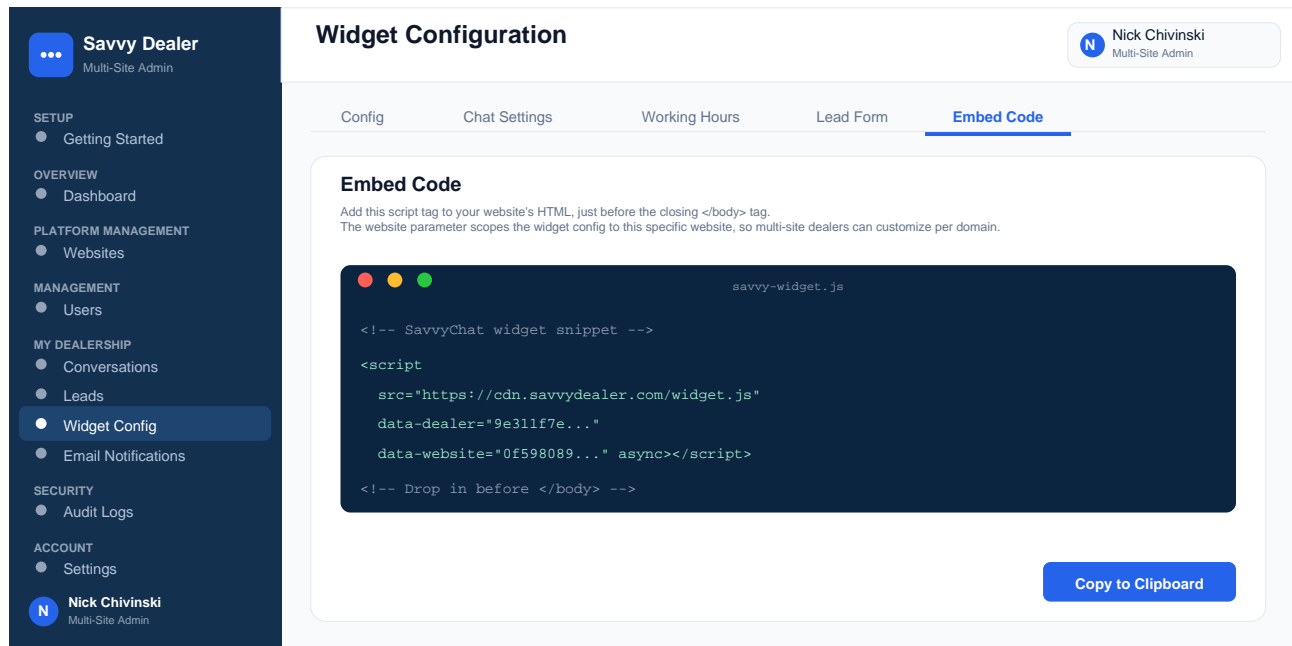

Each field has two toggles: **Visible** (whether it shows in the form at all) and **Required** (whether the visitor must fill it in to submit). Standard fields are Name, Email, Phone, and Question. Default: Name, Email, and Question on and required; Phone on but optional. For a text-first dealership, swap that — require Phone, make Email optional.

HEADS UP

Don't over-require. Each required field costs you conversions. The minimum useful set for an auto dealer is **Name + Phone** (or Email).

8.6 - Embed Code tab

The script tag you (or your web team, or your website provider) paste into your site. Hit **Copy to Clipboard** and you've got it.

The screenshot displays the 'Widget Configuration' interface for 'Savvy Dealer'. The left sidebar contains navigation menus for 'SETUP', 'OVERVIEW', 'PLATFORM MANAGEMENT', 'MANAGEMENT', 'MY DEALERSHIP', 'SECURITY', and 'ACCOUNT'. The 'Widget Config' option is selected. The main content area shows the 'Embed Code' tab, which includes instructions to add the script tag to the website's HTML and a code editor containing the following snippet:

```
savvy-widget.js

<!-- SavvyChat widget snippet -->
<script
  src="https://cdn.savvydealer.com/widget.js"
  data-dealer="9e311f7e..."
  data-website="0f598089..." async></script>
<!-- Drop in before </body> -->
```

A 'Copy to Clipboard' button is located at the bottom right of the code editor.

Embed Code — one script tag, async-loaded, < 50KB.

The snippet includes two data attributes: **data-dealer** (your dealership ID) and **data-website** (the specific website ID this widget is for). Multi-site dealers can have different widget configs per domain — one rooftop, different storefronts, customized independently.

Paste it just before the closing **</body>** tag in your site template. The **async** attribute means the script never blocks page rendering — your Core Web Vitals are safe.

NOTE

When you configured the wizard with a website provider, we already emailed this snippet to them. The Embed Code tab is for the cases where you're hosting your own site, you have a custom CMS, or you want to verify what was sent.

9 - Snippet install & provider notification

When you save the widget config, two things happen at once: we email your website provider the install snippet, and the portal advances to **Step 4 — Provider Notified, Waiting for Approval**.

The screenshot displays the 'Provider Notification' screen in the Savvy Dealer admin interface. The sidebar on the left contains navigation links for various sections. The main content area features a progress bar with five steps: 'User Created', 'Dealership setup', 'Widget Config Setup', 'Provider Notified' (the current step, highlighted in orange), and 'Chat Live'. Below the progress bar is a large white box with a yellow hourglass icon and the text 'Waiting for Provider Approval'. Below this box is a status bar showing 'Provider: DealerInspire' and 'Email sent - awaiting install'.

The waiting screen.

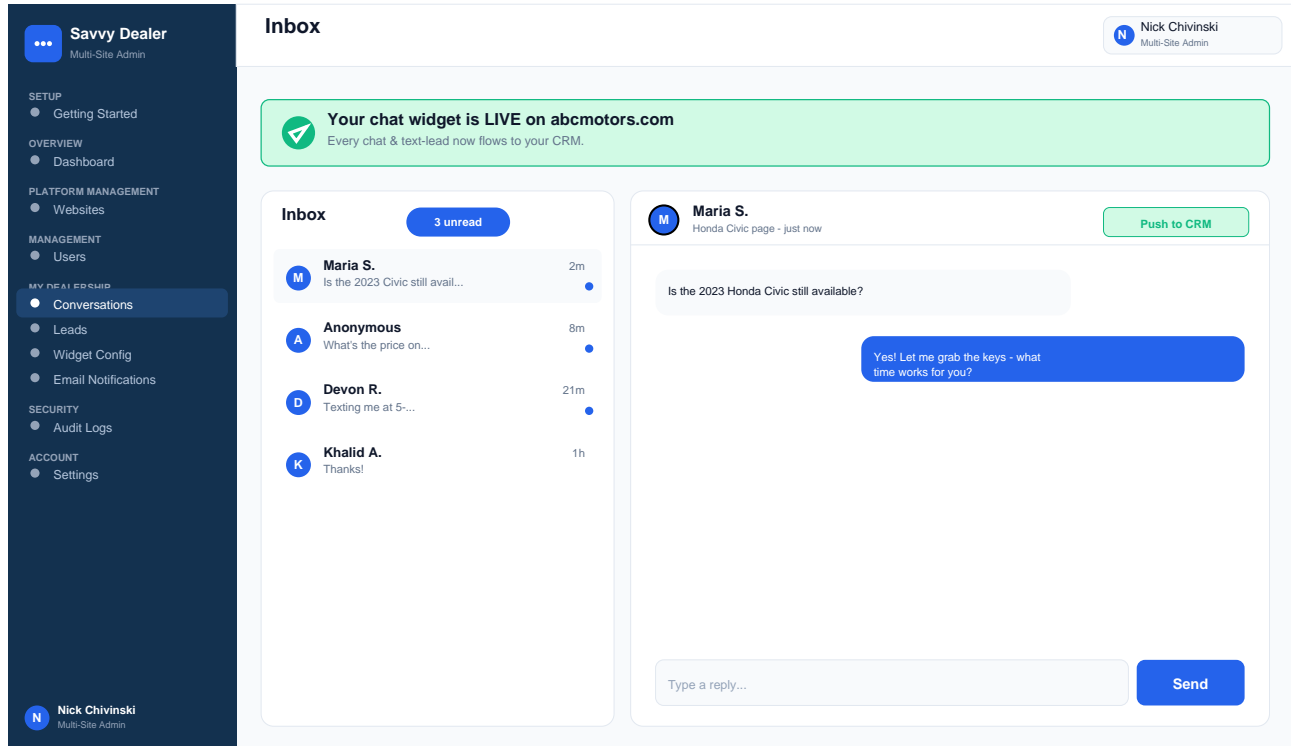

Most providers drop the snippet in within a business day or two; the bigger ones (DealerInspire, Dealer.com) sometimes take 3–5 days depending on their queue. You'll get an email and an in-portal notification the moment it's live.

TIP

Don't sit and wait. Use this time to invite your team under **Users**, configure routing, and write a few canned responses so you're ready when traffic arrives.

10 - Going live & the chat inbox

Once the script is on your site, the portal jumps to **Step 5: Chat Live** and your team starts seeing real conversations in **Conversations**.

The live inbox. Unread conversations are highlighted on the left; active conversation on the right.

Inbox layout

The **left column** is your conversation list, sorted by most recent activity. Unread chats have a blue dot. The number badge at the top counts unread conversations across all rooftops you have access to. The **right pane** shows the active conversation: header with the visitor's name, context (page URL they're chatting from), and the message thread. The composer at the bottom is where you reply.

Who's online

Your status flips automatically based on tab focus and idle time. If you're **Online**, the widget tells visitors the dealership is live. If everyone is **Away** — or you're outside Working Hours — the widget switches to *text capture mode*.

11 - Working a conversation, end to end

1. A visitor opens the widget

A shopper clicks the chat bubble on any page of your site. They see your welcome message. The portal plays a chime for anyone with the inbox open.

2. Conversation appears in the inbox

Lands at the top of the left column, unread. The context line shows the URL they're chatting from.

3. You pick it up

Click the row. The right pane fills in. Type a reply in the composer and press **Send** (or Enter). The visitor sees "Typing..." while you compose.

4. The visitor shares their info

When they ask a real question ("Is this still available?"), follow up: "Happy to check — can I grab your name and a number to text you a quick photo?"

5. You push to CRM

Click **Push to CRM** in the conversation header. Name, number, the page URL, and the transcript flow into your CRM as a new lead.

6. Your BDC takes over

From inside the CRM your team already uses, the BDC continues the conversation by text or phone.

TIP

The single biggest predictor of converting a chat isn't typing fast — it's making the visitor feel *seen*. A 5-second "Be right with you!" outperforms a 60-second perfect reply.

12 - Text-to-CRM lead capture

Not every shopper wants to chat in a browser. Many prefer to text — especially mobile visitors.

SavvyChat's widget makes that easy: a visitor enters name and phone number through the widget, and that information is delivered to your CRM as a real lead within seconds. Your BDC sends the first text from inside the CRM, keeping the entire thread native to your existing systems.

When does the widget switch to text mode?

Automatically when (a) your team is offline (no agents online), or (b) you're outside Working Hours. Or always, if you set Lead Generation Mode to **Lead Form Only**. Visitors see "Our team is offline right now — drop us a text and we'll get right back to you" instead of the live-chat composer.

Anti-junk

Other vendors count service-hour questions, address requests, and address-clarification chats as "leads" on your invoice. SavvyChat doesn't count those at all because *SavvyChat doesn't bill you*. Every text-capture lead in your CRM is a real one.

13 - CRM integration

SavvyChat ships every conversation to your CRM. Out of the box, we support the major automotive CRMs:

DealerSocket	Sales CRM by Solera. Mapped to standard lead fields including name, phone, vehicle of interest (parsed from chat context).
VinSolutions Connect CRM	Cox Automotive's CRM. Pushes to the inbound-internet-lead intake; deduped by phone.
Elead	CDK's automotive CRM. ADF/XML lead format; supports source mapping (set under Settings → Integrations).
Other CRMs	Most other dealership CRMs accept ADF/XML email leads — we drop leads into a dedicated inbox alias that your CRM polls. Ask your rep if your specific platform is mapped.

What gets pushed

Customer info: name, phone, email (if provided). **Vehicle context:** any inventory page they were on when the chat started. **Conversation transcript:** the full thread, attached as a note. **Source:** tagged as *SavvyChat — Chat* or *SavvyChat — Text Capture* so your sales manager can report on it.

14 - Multi-rooftop management

If you run a dealer group, the same login manages all rooftops. Each rooftop has its own widget (color, welcome, routing), its own conversation view in the inbox, and its own CRM integration. Switch between rooftops with the dealer dropdown at the top of the configurator, the inbox, and most other screens. Use **Websites** in the sidebar to add new rooftops, transfer widgets between domains, or add additional domains to a single rooftop.

15 - Roles & permissions

SuperAdmin	Savvy Dealer side only. Manages account emails, billing for paid add-ons (AI Chat), and resolves account issues. Not assigned to dealership users.
Multi-Site Admin	Manages multiple dealerships under one account. Can create new dealer records, change widget config for any of them, see all conversations, and assign Dealer Admins. Sees the full sidebar.
Dealer Admin	Manages a single rooftop. Can change widget config, routing, working hours; see all of that rooftop's conversations; invite Agents. No access to other rooftops.
Agent	Frontline. Picks up conversations, replies to customers, pushes leads to CRM. Can't change widget settings or invite users. Sidebar shows only Conversations and Settings.

16 - Daily playbook for dealership staff

Morning

Open **Conversations** in a pinned browser tab. Toggle yourself to **Online**. Check overnight text-capture leads in your CRM and start follow-up texts before the showroom fills up.

Throughout the day

Reply to chats within 30 seconds. The dashboard chimes when a new conversation starts; keep the chime on. Stepping away? Toggle **Away** so text-capture mode kicks in for visitors who would have hit dead air.

Pre-handoff

Before you push a chat to CRM, confirm contact details with the customer in the chat: *“Want to confirm the right number to text — 555-1234, right?”* Catches typos before they cost you the lead.

End of day

Toggle **Away** when you're done. Double-check that yesterday's pushed-to-CRM leads got worked. Pull the “Source: SavvyChat” report weekly — you'll be surprised how many close.

17 - Troubleshooting & FAQ

My widget isn't showing up on the site.

Three usual culprits. (a) The snippet isn't on the page yet — ask your provider where they are with the install. (b) The script loaded but the Website URL in the portal doesn't match your actual domain (e.g. you typed *www.abcmotors.com* but your site serves *abcmotors.com*). Fix it under Websites → Authorized Domains. (c) Ad-blockers — rare on dealership sites, but they can hide chat widgets.

Chats aren't pushing to my CRM.

Check Settings → Integrations and confirm the CRM is connected and the test lead succeeds. Most failures are an expired API token or a changed inbound-lead email alias on the CRM side. Check the Audit Logs in the sidebar — you'll see exactly when and why each push failed.

I forgot my password.

If you signed up with email/password, hit **Forgot password?** on the login screen. If you signed up with Google or Apple, manage the password with that provider — SavvyChat doesn't store it.

Can I have more than one widget on one site?

Not currently — one widget per rooftop. If you have multiple rooftops on a shared site, talk to your rep about routing rules so the right rooftop picks up the chat.

Does the widget work on mobile?

Yes. Fully responsive; text-capture flow is optimized for mobile.

What does the “Powered by Savvy Dealer” badge do?

A small, non-intrusive link at the bottom of the chat panel. It helps other dealers discover the free tool. It does not collect data from your customers.

How do I add another agent?

Go to **Users** in the sidebar and invite by email. Choose **Agent** as the role. They'll get a sign-up link.

When is AI Chat available?

Coming soon as a paid add-on. Unlike other vendors, it's built to never serve incorrect inventory or pricing — if it doesn't know, it connects the shopper to your team instead of guessing.

What's the Finance Calculator feature?

An embedded payment estimator that lives alongside the chat widget. Currently in development. When enabled, it gets its own configuration tabs (Branding, Out The Door Settings, Settings, Rate Table, Embed Code) under the same Widget Configuration screen.

18 - Getting help

We try to make support feel the way we wish customer support felt for us:

In-portal: click the notification bell in the top-right of any portal screen — we read those daily.

Your Savvy Dealer rep: if you came to SavvyChat through an existing Savvy Dealer relationship, your rep is the fastest path. They can escalate inside our team.

Email: hello@savvydealer.com — for general questions, bug reports, or feedback. Same-business-day replies most of the time.

NOTE

Found a bug or have a feature request? Send it in. SavvyChat is built by dealers for dealers and we ship updates fast.

SavvyChat - Full Walkthrough Edition - (c) Savvy Dealer
